Cincinnati, Ohio
45268

Dear Ms. Patterson, Ms. Adams and Mr. Renninger:

Re: Progress Report: August 1 through 31, 2016 South Dayton Dump and Landfill Site, Moraine, Ohio (Site)

This Monthly Progress Report is submitted in accordance with the Administrative Settlement and Order on Consent (ASAOC) for Remedial Investigation/Feasibility Study (RI/FS) Proceeding Under Sections 104, 107, and 122 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended, 42 U.S.C. §§ 9604, 9607, and 9622 (United States Environmental Protection Agency [U.S. EPA]) Docket No. V-W-16-C-011) effective June 11, 2016 (RI/FS ASAOC), and the ASAOC for Removal Action Proceeding Under Sections 104, 106(a), 107, and 122 of the CERCLA, 42 U.S.C. §§ 9604, 9606(a), 9607, and 9622 U.S. EPA Docket No. V-W-13-C-010, effective April 8, 2013 (Removal Action ASAOC), for the period of August 1 through 31, 2016.

The next Progress Report for the month of September 2016 will be submitted on or before October 10, 2016.

ISO 9001

Significant Developments in this Reporting Period

RI/FS ASAOC Developments

As reported previously the Respondents have initiated activities regarding access agreements for the RI/FS field work. This includes a review of existing access agreements and updates as required based on the proposed work activities and changes in property ownership. As agreed with USEPA, the access agreements for background sampling locations will be developed following sample location selection.

On August 3, 2016, the owner of the property located at 1951 Dryden Road (Bruce Mangeot of B&G Equipment and Truck Repair), U.S.EPA and GHD met to discuss the proposed access agreement for work under the RI/FS. The discussions with the property owner are ongoing.

On August 12, 2016 GHD provided U.S.EPA with a link for downloading the Quality Assurance Project Plan (QAPP) (Appendix E of the RI/FS Work Plan for Operable Units 1 and 2), at the agency's request.

U.S. EPA requested information concerning locations where lead has been detected in surface material at concentrations above threshold concentration values. On August 31, 2016 GHD provided U.S.EPA with two figures from agency reports to help identify areas of the Site that U.S.EPA have deemed locations of interest due to the elevated presence of lead in surficial soil (< 2 ft bgs). Additional information requested by the agency includes photographs of the general sample locations, to be provided by GHD on behalf of the Respondents.

Removal Action ASAOC Developments

On August 4, 2016, U.S.EPA and the Respondents participated in a conference call regarding the status of the sub-slab depressurization system (SSDS) modifications.

During the August 4 conference call, the participants discussed the following topics:

- GHD completed semi-annual methane monitoring at GP-2 and Site area soil gas probes (GP-7, GP-12, GP22-13, GP23-13, GP24A-13, and GP24B-13) on July 21, 2016. Methane was detected at GP-2 (12') (16') at levels greater than 100% of the Lower Explosive Limit (LEL) (5% methane by volume in air). Methane was not detected at the Site area soil gas probes during the July 2016 methane monitoring events.
- In accordance with Addendum 2 of the Vapor Intrusion (VI) Work Plan (GHD, 2015), GHD increased the monitoring frequency from Tier 3 (semi-annually) to Tier 2 (weekly) status and completed methane monitoring at GP-2 and Site area soil gas probes on July 29, 2016. The monitoring includes filtered and unfiltered measurements (analyzed using a Landtec GEM2000) to distinguish between methane and other organic compounds. Unfiltered methane levels remained greater than the LEL.
- Methane was not detected at the Site area soil gas probes during the July 2016 methane monitoring
 events and has not been detected at these probes since September 12, 2013. Based on the
 non-detect methane readings at the Site area soil gas probes over the past three years, the elevated

levels detected at GP-2 are not related to landfill activities from the South Dayton Dump Site and are not the result off-Site migration.

- GHD proposed to modify Addendum 2 to reduce the frequency of methane monitoring because the
 field monitoring results indicate that the elevated methane readings at GP-2 are unrelated to landfill
 activities from the South Dayton Site.
- USEPA requested GHD collect a SUMMA canister sample for analysis of TO-15 VOCs from GP-2 in order to determine the percentage of VOCs and methane in the soil gas and to evaluate GHD's proposal to revise the monitoring frequency at GP-2.
- GHD will continue to monitor methane at GP-2 and Site area soil gas probes weekly in accordance with Addendum 2 of the VI Work Plan, while additional analytical data is obtained.
- U.S.EPA recommended GHD notify Dayton Power & Light (DP&L) and City of Moraine of the seasonal elevated levels of methane and the potential explosion hazard within the Dryden Road right of way.
- U.S.EPA and Respondents agreed that no further modifications or adjustments to the SSDS in Buildings 24 (Globe Equipment) and 15 (SIM Trainer) were required and agreed to proceed with annual monitoring in Winter 2017.
- U.S.EPA and Respondents agreed to complete valve adjustments and real time monitoring of vacuum response at Building 12 (Overstreet Painting) and Building 14 (NexGen Vending).
- U.S.EPA requested that Respondents provide U.S.EPA with hybrid sampling programs for Building 12 (S&J Precision), Building 8 (B&G Equipment and Truck Repair), and Building 9 (B&G Equipment and Truck Repair), that are protective of indoor air prior to committing to annual monitoring.
- The next conference call is scheduled for Thursday September 22, 2016 at 2:30 PM ET / 1:30 PM

On August 5, 13, 19, 23 and 29, 2016, GHD completed weekly methane monitoring at GP-2 and Site Area Gas Probes (GP-7, GP-12, GP22-13, GP23-13, GP24A-13, and GP24B-13) in accordance with Addendum 2 of the Vapor Intrusion (VI) Work Plan (GHD, 2015). GP-2 and Site Area Gas Probe locations are shown in Figure 1. Filtered methane levels at GP-2 remained below 100% of the LEL (< 5% methane), while unfiltered methane levels remained greater than 100% of the LEL. Unfiltered methane levels appear to be trending downwards as methane levels have decreased from 44.1% to 15.7% between the August 13, 2016 and August 29, 2016 monitoring rounds. Methane was not detected in any Site Area Gas Probes with the exception of GP23-13, where methane levels were 3.4% (68% of the LEL) during the August 29, 2016 monitoring round. Prior to August 29, 2016, methane was last detected at GP23-13 in September 2013 at 0.1%. GHD will continue to monitor methane at GP-2 and Site Area Gas Probes in accordance with Addendum 2 of the VI Work Plan. Methane monitoring results are provided in Tables 1, 2, and 3.

On August 16, 2016, GHD notified Dayton Power and Light Company (DP&L) and the City of Moraine of the seasonal elevated levels of methane adjacent to the DP&L property located at 1900 Dryden Road in Moraine, Ohio, as requested by U.S.EPA during the August 4, 2016 conference call. Notification was provided through letters distributed by electronic mail (email) to Mr. Rizer of DP&L and Mr. Campbell, Chief Cooper and Mr. Eddy of the City of Moraine, dated August 16, 2016.

On August 19, 2016, GHD collected 1-hr, 6-Litre SUMMA canisters samples at GP-2 (two depths) for analysis of TO-15 VOC list and methane as requested by U.S.EPA during the August 4 conference call. Preliminary analytical results were received by GHD on August 31 and discussed with U.S.EPA on September 1, along with results from weekly methane monitoring.

On August 24, 2016, GHD contacted Ohio Utilities Protection Services (OUPS) and requested copies of maps of sewers and other utility types for the section of Dryden Road between East River Road and Nicholas Road. GHD notified U.S.EPA that the requested information would be available by September 8, 2016 and that GHD would try to obtain information from DP&L regarding their buried infrastructure.

The status for each building requiring mitigation, as of August 31, 2016, is summarized in Attachment A.

Summaries of all Anticipated Problems and Planned Resolutions

No problems were encountered during the reporting month and none are currently anticipated.

Projected Work for the Next Reporting Period

- The Respondents and U.S.EPA On-Scene Coordinator will continue to work together to discuss
 VI mitigation measures and implement the mitigation work plan.
- Negotiating Site Access Agreements with landowners and tenants whose properties currently reside within or adjacent to the Site.
- Complete weekly methane monitoring at GP-2 and corresponding Site Area landfill gas probes, in accordance with Addendum 2 of the VI Mitigation Work Plan.

Should you have any questions on the above, please do not hesitate to contact us.

Sincerely,

GHD

Julian Hayward

Notes:

| R - Value was rejected (R) as the LEL reading did not correspond to the methane reading of 0 percent.
| PID - Photoionization Detector

O₂ - Oxygen

CO2 - Carbon Dioxide

CO₂ - Carbon blokee

CH₄ - Methane

LEL - Lower Explosive Limit

U - Qualified as non-detect due to issues with the filter

Value - Value is greater than screening levels for rapid response (USEPA, 2010).

 $^{^{1}}$ - The explosive gas monitor baseline reading was 1 percent LEL. The meter did not zero for LEL readings and the corresponding methane readings were 0 percent; therefore, the readings of 1 percent are anomalous.

Notes:

[1] - The explosive gas monitor baseline reading was 1 percent LEL. The meter did not zero for LEL readings and the corresponding methane readings were 0 percent; therefore, the readings of 1 percent are anomalous.

[2] - The Landtec GEM 2000 combustible gas monitor measures explosive gases as a percent of methane by volume. The presence

of other hydrocarbon gases affects methane readings.

[٥] -CO₂ readings started at 0.1 ppm.

[4] -GHD field personnel noted the presence of a manhole (and a possible underground utility) located ~ 3 feet from GP-2 that may be contributing to elevated methane levels [5]

Collected SUMMA canister samples at GP-2 (12')(16')

PID - Photoionization Detector

 O_2 - Oxygen

CO₂ - Carbon Dioxide

CH₄ - Methane

LEL - Lower Explosive Limit

MM - Not measured

U - Qualified as non-detect due to issues with the filter Value - Value is greater than LEL for methane (5 percent methane) Table 3 Page 1 of 10

Notes:

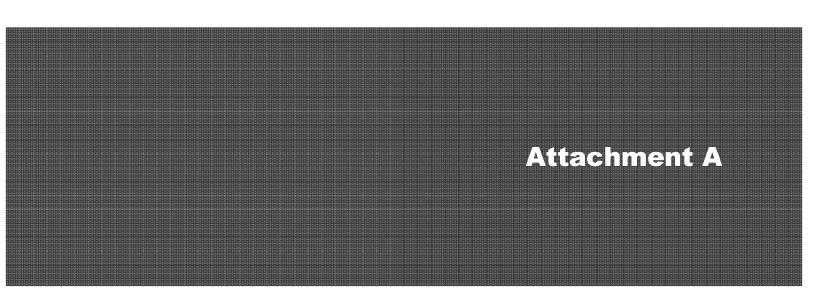

ш -CO₂ readings started at 0.1 ppm.

PID - Photoionization Detector

O₂ CO₂ - Oxygen - Carbon Dioxide CH₄ - Methane - Lower Explosive Limit LEL

NM - Not measured U

- Qualified as non-detect due to issues with the filter Value - Value is greater than LEL for methane (5 percent methane)

GHD | 038443Patterson-Renninger-Adams-3-AttTP

Summary of Building Status

As of August 31, 2016, the status of each building requiring mitigation was as follows:

Building 8 (B&G Equipment and Truck Repair):

- 30-day proficiency sampling completed on September 12, 2013, with additional confirmatory sampling completed on January 9, 2014 and March 10, 2014.
- 2015 indoor air (IA) and/or sub-slab (SS) soil vapor sampling were completed on February 17, 2015, July 15, 2015, and October 6, 2015.
- Sub-slab depressurization system (SSDS) modifications including EP-3 and EP-5 stemline installations were completed on February 5, 2016.
- 60-day post-SSDS modification sampling was completed at Building 8 (B&G Equipment & Truck Repair) on April 13, 2016:
 - Analytical results show significant decreases in SS concentrations.
 - Concentrations at SS-8-B and SS-8-D are less than Ohio Department of Health (ODH) Screening Levels. SS concentrations of TCE at SS-8-A remain greater than ODH Screening Levels.
 - U.S.EPA and Respondents agree that no further modifications to the SSDS are required as vacuum response at the worst-case, sub-slab probe are good and vapor intrusion is not occurring.
 U.S.EPA requests that GHD develop a hybrid annual sampling program that is protective of indoor air at Building 8, prior to committing to annual monitoring.
- Respondents will provide U.S. EPA with a hybrid sampling program for annual monitoring at Building 8.

Building 9 (B&G Equipment and Truck Repair):

- 30-day and 180-day proficiency sampling completed on October 24, 2013 and March 10, 2014, respectively, with additional 180-day confirmatory sampling completed on May 20, 2014.
- Two rounds of 2015 IA and SS soil vapor sampling completed on February 17, 2015, and July 15, 2015.
- SSDS modifications including EP-2 stemline installation and EP-3 installation were completed on February 5, 2016.
- 60-day post-SSDS modification sampling was completed at Building 9 (B&G Equipment & Truck Repair) on April 13, 2016.
 - Benzene and xylene concentrations in IA were greater than the ODH screening levels; however benzene and xylene are not detected (or detected at low levels) in the SS and the IA exceedances are not attributed to vapor intrusion.
 - Analytical results show significant decreases in SS concentrations. However, SS concentrations
 of TCE at SS-9-A remain greater than ODH Screening Levels.
 - U.S.EPA and Respondents agreed that no further modifications to the SSDS are required but acknowledge the building is not in compliance since SS concentrations remain greater than ODH

screening levels. U.S.EPA requests that GHD develop a hybrid annual sampling program that is protective of indoor air at Building 9, prior to committing to annual monitoring.

 Respondents will provide U.S. EPA with a hybrid sampling program for annual monitoring at Building 9.

Building 12 (Overstreet Painting and S&J Precision):

- 30-day proficiency sampling completed on October 24, 2013. A corrective action was implemented on March 6, 2014 and additional confirmatory sampling was completed on April 2 and 3, 2014.
- Two rounds of 2015 IA and SS soil vapor sampling completed on February 18, 2015 and July 13, 2015.
- Respondents and U.S. EPA proposed SSDS modifications to the building owner and tenants during the January 28, 2016 meeting.
- SSDS modifications at Building 12 (Overstreet Painting and S&J Precision) began on April 4, 2016 and were completed by April 13, 2016.
- 60-day post-SSDS modification sampling and annual proficiency sampling completed at Building 12 (Overstreet Painting and S&J Precision) in one joint event on June 15 and 16, 2016, respectively:
 - There are no IA exceedances at S&J Precision.
 - TCE concentration in the SS soil vapor sample collected at SS-12-SJ-B remain greater than
 ODH screening levels; however concentrations have decreased compared to previous results.
 - The current SSDS configuration produces good vacuum responses at SS-12-SJ-B (-0.2 inches of water column [" w.c.]).
 - U.S.EPA requests the Respondents develop a hybrid annual sampling program that is protective of indoor air at Building 12 (S&J Precision), prior to committing to annual monitoring.
 - Respondents will provide U.S.EPA with a hybrid sampling program for annual monitoring at Building 12 (S&J Precision).
 - TCE concentrations in SS soil vapor samples collected at SS-12-OP-A and SS-12-OP-B are greater than the ODH Screening level and have increased compared to 2015 results.
 - Concentrations of three analytes (benzene, m&p xylenes, and naphthalene) exceeded IA ODH screening levels, but are not detected in corresponding SS samples and are not attributable to vapor intrusion.
 - U.S.EPA and Respondents agree to complete adjustments to the SSDS valves in order to obtain optimal vacuum response. GHD will conduct real time readings with a photoionization detector (PID) during the valve and vacuum adjustments.
 - Respondents will complete confirmatory sampling at Building 12 (Overstreet Painting) after SSDS valve and vacuum adjustments.

Building 14 (NexGen Vending):

 30-day proficiency sampling completed on January 16, 2014 and 180-day proficiency sampling completed on June 3, 2014.

- Two rounds of 2015 IA and SS soil vapor sampling completed on February 19, 2015 and July 16, 2015.
- A proposed SSDS modification (addition of an extraction point) was agreed upon during the January 28, 2016 meeting.
- SSDS modifications at Building 14 (NexGen Vending) were completed on April 6, 2016.
- 60-day post-SSDS modification sampling and annual proficiency sampling completed at Building 14 (NexGen Vending) in one joint event on June 15, 2016:
 - There are no IA exceedances at NexGen Vending.
 - TCE and 1,1-dichloroethane (1,1-DCA) concentrations in SS soil vapor samples collected at SS-14-A are greater than the ODH screening levels and have increased compared to previous results, including 2012 pre-mitigation results.
 - These results are anomalous and are not in line with previous results based on review of all contributing aspects.
 - USEPA and Respondents agree to complete adjustments to the SSDS valves in order to obtain optimal vacuum response. GHD will collect real time readings with a PID during the valve adjustments.
- Respondents will complete confirmatory sampling at Building 14 after SSDS valve and vacuum adjustments.

Building 15 (SIM Trainer):

- 30-day proficiency sampling completed on February 13, 2014. A corrective action was implemented on April 6, 2014 and additional confirmatory sampling was completed on April 24, 2014.
- Two rounds of 2015 IA and SS soil vapor sampling completed on February 18, 2015 and July 14, 2015.
- Respondents and U.S. EPA proposed SSDS modifications to the building owner during the January 28, 2016 meeting.
- SSDS modifications at Building 15 (SIM Trainer) were completed on April 6, 2016.
- 60-day post-SSDS modification sampling and annual proficiency sampling completed at Building 15 (SIM Trainer) in one joint event on June 17, 2016:
 - There are no SS exceedances at SIM Trainer.
 - IA concentration at IA-15-C is greater than the ODH screening level for tetrachloroethene (PCE);
 however, PCE was not detected at concentrations greater than ODH screening levels in the corresponding SS-15-C sample, and are therefore not attributable to vapor intrusion.
 - The current SSDS configuration produces good vacuum response at SS-15-C (-0.4" w.c.).
 - U.S. EPA and Respondents agree that no further modifications to the SSDS are required.
- Respondents will complete annual monitoring at Building 15 in Winter 2017.

Building 17 (Megacity Construction):

- 30-day and 180-day proficiency sampling completed on January 16, 2014, and June 3, 2014, respectively.
- 1-year proficiency sampling completed on February 19, 2015.
- Annual proficiency sampling was completed on February 10, 2016.
- The building is in compliance.

Building 24 (Globe Equipment):

- 30-day, 180-day, and 1-year proficiency sampling completed on September 11, 2013, February 7, 2014, and December 5, 2014 respectively.
- One-year confirmatory sampling completed on February 20, 2015.
- Additional confirmatory sampling completed on July 16, 2015.
- SSDS modifications for Globe Equipment were completed on February 13, 2016.
- Annual proficiency sampling was completed on February 11, 2016.
 - The building is in compliance; IA and SS concentrations are less than applicable ODH screening levels.
- Respondents will complete annual monitoring at Building 24 in Winter 2017.
